

Daniil Olekh

Frontend Engineer (React / TypeScript)

Vienna, Austria · remote, EU time zone · danyaolekhq@gmail.com · danolekh.com · github.com/danolekh · linkedin.com/in/danolekh · Telegram @danolekh

Frontend-leaning full-stack developer, about three years commercial, React and TypeScript most of the day. React 19, Next.js App Router, TanStack Router and Query, SSR and hydration, Astro for content sites, Tailwind, pixel-precise Figma work. I also build the API behind the UI when needed (Node, Postgres). Built consolline.com solo, a four-language Astro site with WebGL2 animation checked against Figma, and sportmagaz.com.ua, a store with view transitions and its own admin panel. Best-known speed result: a site rebuild that took mobile PageSpeed from 69 to 99.

EXPERIENCE

Renewator · Software Engineer (contract) 2026 · Remote

- Built consolline.com solo in Astro for an international logistics company: 4 languages, 148 static pages, custom WebGL2 globe and halftone shaders, scroll-driven sections with no animation library, headlines sized at build time so no language shifts layout, checked against Figma with pixel diffs.
- Built event-driven Node.js microservices for a live iGaming platform (identity, gateway, wallet, bonus, casino, notification): Express, Drizzle ORM, PostgreSQL, Redis, Docker, GitLab CI.
- Shipped per-brand GEO access rules end to end: schema, the shared decision function, gateway counters, monitoring alerts on threshold crossings, admin CRUD and the React admin UI.

Freelance (Upwork) · Full-Stack Developer Jan 2026 – Aug 2026 · Remote

- Rebuilt an agriturismo website on Astro, Tailwind and Strapi (IT/EN i18n, role-based CMS access, Vercel + Railway): mobile PageSpeed 69 → 99, load time ~16 s → under 2 s, 5.0 client review. Case study: danolekh.com/p/oasi-kadir
- Reverse-engineered the parallax carousel, card carousel and menu animation from the old site's minified WordPress bundle (no source available) and reimplemented them 1:1.

Quextro · Founding Engineer Dec 2024 – Dec 2025 · Remote

- Built the entire ed-tech platform solo: Bun + Effect.ts + Drizzle ORM on the back, React 19 + TanStack Router on the front. Used today by British teachers and students.
- Designed the core LLM pipeline that extracts questions and topics from PDF exam papers, with Zod-validated output and retries when the model returns something wrong.
- Owned the React app end to end: TanStack Query cache design, optimistic updates, SSR and hydration, accessible UI.

Freelance · Full-Stack Developer May 2024 – Dec 2024 · Remote

- Built and deployed sportmagaz.com.ua solo, a sports-equipment store for Ukraine: Next.js 14, tRPC, Drizzle ORM and PostgreSQL, with a custom admin CMS for 2,000+ products (roles, specs editor, S3 image manager), attribute filters with live counts, Nova Poshta delivery lookup and Telegram order alerts.
- Re-platformed it in 2026 to static Astro on Cloudflare Workers: view transitions that morph the product photo into its page, prices re-checked on the server by an Effect checkout worker.
- 90+ Real Experience Score and steady organic SEO traffic (JSON-LD, sitemap, Google Merchant feed).

Radency · Software Engineer 2023 – 2024 · Kyiv / remote

- Optimized a multi-tenant system (React, Express, Firebase) serving 10,000+ active users.
- Built internal Vue/NestJS tools and Chrome extensions used daily by the HR department.

PROJECTS

Azulejo (azulejo.danolekh.com): Ceramics storefront on TanStack Start + React 19, Drizzle + PostgreSQL, deployed on Cloudflare Workers (Hyperdrive), R2 media pipeline with sharp and blurhash, Strapi-backed journal, Vitest.

OPEN SOURCE

- opentui**, the terminal-UI library [opencode](https://github.com/danolekh/opentui) is built on. Merged PR #558: browser-like text selection in textareas and a viewport-change selection bug fix.
- code-racer**, top contributor in 2023 (WebDevCody): multiplayer race rooms feature plus several fixes.

SKILLS

Frontend	React 19, Next.js (App Router), TanStack Start / Router / Query, Astro, Tailwind CSS, View Transitions, WebGL2, Zustand, Radix / Base UI, Vite
Languages	TypeScript, JavaScript, Python, SQL
Backend	Node.js, Bun, Express, Hono, Effect.ts, tRPC, REST APIs, webhooks, Zod, event-driven services
Data	PostgreSQL, Drizzle ORM, Redis, SQLite, S3 / R2
Infra	Docker, GitHub Actions, GitLab CI, Vercel, Cloudflare Workers, AWS, Railway, OpenTelemetry
Other	Strapi, Core Web Vitals / performance, SEO, i18n, LLM integration, Vitest, Claude Code daily (1+ yr)

EDUCATION

BSc Computer Science, Taras Shevchenko National University of Kyiv (2022 – 2026)

LANGUAGES

Ukrainian (native), Russian (fluent), English (B2), German (beginner)
